DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Pinczolits, et al., "Direct Formation of Self-Assembled Quantum Dots Under Tensile Strain by Heteroepitaxy of PbSe on PbTe (111)", *Applied Physics Letters*, V. 73, No. 2, pp. 250-2; 13 July 1998.

Pinczolits anticipates a semiconductor optical device comprising: in fig. 4, a substrate PbTe (111) having a surface of a first semiconductor having a first lattice constant, and a semiconductor lamination layer PbSe formed on said substrate, said semiconductor lamination layer having an active layer which contains quantum dots of a first kind made of a second semiconductor having a second lattice constant smaller than the first lattice constant, also in tensile strain, p. 250, ¶ 1-2, p. 252, last ¶.

Application/Control Number: 10/644,803

Art Unit: 2823

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2, 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pinczolits as applied to claim 1, 12 above, and further in view of Shields et al., U.S. Publication No. 2002/0196827 A1.

Pinczolits does not specify forming a barrier layer includes the active layer, but Shields does. Shields teaches an optical device, in fig. 16, wherein the active layer, further includes barrier layers 317 substantially lattice matching the first lattice constant, and the quantum dots of the first kind, 315, are buried in the barrier layers, p. 14, ¶ 233; wherein the active layer has a pair of end planes constituting a cavity, and the device further comprising antireflection films formed on the pair of end planes; wherein the active layer has a pair of end planes constituting a cavity, and the device further comprising antireflection films formed on the pair of end planes; further comprising a pair of optical fibers optically coupled to the pair of end planes, p. 7, ¶ 95. Shields gives motivation in pp. 1-2, ¶ 15. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to recognize that combining Shields's process with Pinczolits's invention would have been beneficial because it increases emission efficiency.

Application/Control Number: 10/644,803

Art Unit: 2823

Allowable Subject Matter

Claims 3-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 13-20 are allowed. The following is an examiner's statement of reasons for allowance: in claim 13, the features of lines 6-11 can not be found in the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William M. Brewster whose telephone number is 571-272-1854. The examiner can normally be reached on Full Time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Olik Chaudhuri can be reached on 571-272-1855. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2823

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
